Complimentary Study Evenings

patient specific abutments for all major implant systems

Bristol - Birmingham - Glasgow - Leeds - Manchester

Introducing Atlantis™ Live

Evening presentations to learn about the Clinical & Laboratory advantages both financially & aesthetically that using Atlantis™ CAD/CAM abutments can bring to your business.

Atlantis is the leading CAD/CAM solution for patient-specific abutments in the US. The secret behind the success is the patented software, Atlantis VAD™ (Virtual Abutment Design) used by Astra Tech to design the abutments. With Atlantis VAD, abutments are uniquely designed from the final tooth shape for a more natural aesthetic result and optimal mechanical properties. This patented process provides patient-specific solutions for single, multiple and full arch units. Atlantis abutments

improve the final aesthetic result for all major implant systems & are available in titanium, gold shaded titanium, zirconia, shaded zirconia & suitable for all positions in the mouth.

Lecturers

Tim Doswell

Tim qualified with Honours from Leeds Dental Institute in 1996. He Practices at the award winning Carlton House Dental Practice in Knaresborough and the Raglan Suite in Harrogate and takes implant referrals from across the North of England. He has run courses on the restorative phase of implant treatment and regularly lectures to local colleagues on the subject. He is currently studying for the FGDP(UK) Diploma in Implant.

Adam Glassford

Adam qualified from Leeds University in 1996 and worked in general practice alongside Steve Byfield for 4 years in Ripon where he first developed his interests in implant dentistry. He set up Carlton House Dental care with Dr Tim Doswell in 2000, a fully private restorative, implant and cosmetic dental clinic. He has undertaken three one year courses in restorative and implant dentistry as well as a Diploma in Conscious sedation. Adam has attended advanced implant courses in the UK and Germany and is currently completing his Diploma in Implant dentistry. Currently his time is divided between fully private general dental practice and referral based implant practice in Knaresborough and Harrogate at the James Hull Centre of Excellence.

Mark Ambridge RDT

Mark is managing director and senior ceramist of the specialist dental implant laboratory Ambridge Ceramics Ltd. His laboratory works with some of the most highly regarded implant surgeons in the UK. He qualified as a Technician in 1984 at Leeds Dental School and is now a registered DCP. He holds advanced qualifications in Crown & Bridge and Orthodontics and a further certification is held in HFO composite restorations, Emax Allceram all systems, Noritake Super Ceramic all systems. He specialises in Smile Makeovers, Implant Restorations & Composite Restorations.

Steve Cambell

Steve is the manager and senior metal technician at Ambridge Ceramics Ltd. which works with some of the most highly regarded implant surgeons in the UK. Steve works with a skilled team providing solutions for all aspects of implant dentistry, including CAD/CAM abutments, milled bars and planning for complex combination cases. He is a registered dental technician with the GDC. Passionate about Atlantis and its possibilities.

"Since starting to use the system we have seen a dramatic increase in our lab productivity, it has allowed us to be 100% confident in the quality and consistency of the abutments we supply. Atlantis has given us the opportunity to move away from very time consuming methods and use our skilled technicians time to concentrate more on case planning and better final outcomes, in fact it's fair to say that we now have more confidence in the abutments we provide our surgeons than ever before!" Steve Campbell
